

Real-time Personalized Health Platform

together let's radically improve & personalize care

Medication Adherence is Complicated

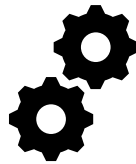

Not Taking Meds as Prescribed Costs \$290 Billion/yr¹ and Med Errors Account for 10-20% of all Hospital Admissions²

Timing

It's not easy to take meds as prescribed, especially with multiple meds & dosing times

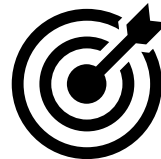

Overwhelming & stressful for all involved

Side effects

From nausea to hallucinations, these can be dangerous, even fatal

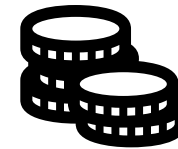

Unwanted side effects need to be monitored & properly managed

Efficacy

When people don't think their meds are working, they're less likely to stick with them

Personalized care is key to long-term health

Barriers

Most pharmacies lack the time, capital, space, technology & know-how to effectively implement adherence programs

Scale is impossible

Innovation is required to impact adherence and reduce the total cost of care

The Only Fully Integrated End-to-End Solution

Own & Operate the Service Platform with all Necessary Components to Address Medication Adherence

Patented adherence platform

Connects each of our high-volume adherence packaging hubs to community pharmacies to patients using our world class digital solutions

High-volume hub pharmacies

Our owned & operated high-volume hubs provide superior scale and access for community pharmacies to join our rapidly expanding network

In-house clinical team

For remote patient monitoring, virtual pharmacy & telehealth services to drive down total cost of care for large payers by actioning clinical data at a personalized level

Connected digital health data

Easy-to-use technology in the patient home, phone or in long-term care facilities to optimize adherence at the patient level while sharing real-time data with our clinical team

The only end-to-end adherence solution

Pack4U owns & controls all critical pieces and seamlessly integrates with our patented technology platform and specialize in an enhanced customer experience

Go Beyond Adherence with Connected Care

Pack4U Provides in-Home Services with Pharmacist-powered Personalized Healthcare, Experience & Outcomes

Monitor in-home medication dispensing

Ask personalized questions & reminders

Review integrated connected device data
i.e. weight scale, blood pressure

Do tele-health consults with built-in camera
